PROJECTS

Vastra AI: Weaving Ideas into Reality | GITHUB

Aug 2025

- Developed a personalized recommendation system for virtual exhibitions using K-Nearest Neighbors (KNN) and K-Means clustering to address the cold-start problem.
- The model uses user demographic attributes (nationality, gender, role) to group similar users and recommend relevant exhibitions based on profile similarity.
- Implemented a weighted relevance scoring system and achieved an F1-score of 0.70 across simulated user profiles.

Tech used : KNN, Python, Git,Github
